

Ghanendra Yadav

Software Test Engineer | QA Automation | AI-Driven Testing | Fintech & Multi-Domain
ghanendrabl@gmail.com | +91-7999697219 | Bengaluru, India | linkedin.com/in/ghanendra-yadav

8.1+	1,100+	1.6M+	~80 TPS	AI-DRIVEN
YEARS EXPERIENCE	DEFECTS MANAGED	DAILY TRANSACTIONS	STABLE (VALIDATED ~78.5 TPS)	TESTING EXPERTISE

SUMMARY

QA Automation Engineer with **8.1 years of experience** validating high-throughput **fintech** platforms, AI-driven systems, and 57-service distributed architectures. Specialist in **Playwright automation**, **performance testing at ~80 TPS scale**, and **AI chatbot validation**. Proficient in **Functional Manual Testing**, **UI Automation Testing** using **Playwright**, **Selenium**, **Java**, and **TestNG**, and **API Testing** using **Postman**, **Playwright**, and **RestAssured**. Experienced in testing web and mobile applications across multiple domains including **Fintech**, **Healthcare**, **Travel**, **Gaming**, **HRMS**, and **LMS**. Skilled in CI/CD tools like **Jenkins**, bug tracking tools including **JIRA**, Linear, and Bitrix24, and test management platforms such as **TestRail** and **Zephyr**.

TECHNICAL SKILLS

Manual Testing	Functional Testing, Regression Testing, Smoke Testing, Sanity Testing, End-to-End Testing
Automation Testing	Playwright with TypeScript, Java, Selenium WebDriver, TestNG, Maven
API Testing	Playwright, Postman, REST Assured
Performance Testing	Load Testing, Stress Testing, Soak Testing, TPS Validation (~78.5 TPS / ~80 TPS), Performance Benchmarking
AI Testing	AI Chatbot Testing, Dispute Management AI Validation, Anomaly Detection, AI-Assisted Defect Identification
Tools & Platforms	Jenkins (CI/CD) · JIRA · Linear · Bitrix24 · TestRail · Zephyr · Confluence · Slack · Microsoft Teams
Domains	Fintech, Healthcare, Travel, Gaming, HRMS, LMS
SDLC Process	Agile Methodology, Waterfall Model

PROFESSIONAL EXPERIENCE

Software Test Engineer

Paywize Technologies Private Limited, Bengaluru

Aug 2025 – Present

PROJECT #1: Connected Banking & BBPS - FintechOS

Client: Paywize

Mar 2026 – Present

A scalable Connected Banking platform built on FintechOS enabling seamless multi-bank integration for real-time payments, account management, and transaction processing. Supports VAM-based funding, beneficiary management, multi-bank routing, transaction monitoring, ledger reconciliation, and BBPS integrations for biller onboarding and payment processing, enhanced with AI-driven fraud detection and anomaly identification.

Roles & Responsibilities

- Led end-to-end QA strategy for **Connected Banking** and **BBPS modules**, ensuring **high-quality delivery** across web, API, and integration layers
- Designed, developed, and executed **automation test scripts** using **Playwright** for **critical banking workflows**, covering both **UI and API layers**
- Spearheaded **API Testing** using **Playwright** and **Postman**, validating transaction processing, **BBPS payment flows**, status transitions, and **multi-bank integrations**
- Owned **Integration Testing** across banking partners, ensuring **seamless interoperability** between internal systems, **BBPS services**, and **third-party payment gateways**
- Performed end-to-end **performance testing** for Connected Banking system, validating **~78.5 TPS** against **80.2 TPS target**, executing **load/stress/soak testing** for **57-service architecture** handling **1.6M+ daily transactions** with **stable 80 TPS** and **peak 100 TPS** validation
- Applied **AI-driven testing techniques** to generate **intelligent test scenarios**, detect anomalies, and enhance **defect prediction** and coverage

- Managed and tracked **300+ defects** in **JIRA**, including **AI-assisted defect identification**, prioritization, triaging, and **regression validation**
- Ensured **compliance with banking standards** and **payment regulations**, especially for **BBPS workflows** and **real-time payment processing**
- Validated end-to-end **ledger reconciliation** processes, ensuring accurate **transaction matching**, **settlement verification**, and **discrepancy handling** across multi-bank and BBPS systems
- **Mentored QA team** members, reviewed test artifacts, and enforced **best practices** in **automation**, **API testing**, and **integration validation**

► AI Testing — Dispute Management & Live AI Chatbot

- Performed functional and conversational testing of the **Live AI Chatbot**, validating **intent recognition**, **response accuracy**, **fallback handling**, and **context retention** across **dispute management workflows**
- Validated **AI-driven Dispute Management** flows including **automated dispute initiation**, **AI-suggested resolutions**, **escalation triggers**, and **real-time status updates** via API and UI testing
- Tested **AI anomaly detection models** by injecting **edge-case transaction scenarios** to verify **fraud alerts**, **threshold breaches**, and model response accuracy
- Conducted **negative and boundary testing** on AI responses to ensure **graceful degradation**, error handling, and **fallback to human agents**
- Collaborated with **AI/ML** and product teams to define **acceptance criteria**, validate **model outputs**, and ensure AI feature releases met **quality standards**

 Architecture Scale Tested: **11+ Core Modules** | **57 Services** | **1.6M+ Daily Transactions** | **Stable ~80 TPS (Validated ~78.5 TPS)** | **Peak ~100 TPS** | **99.9% Uptime Target**

PROJECT #2: Payout & Collection Engine

Aug 2025 – Mar 2026

Client: Paywize

A robust Payout & Collection Engine handling high-volume financial transactions with multi-bank integration, VAM-based routing, beneficiary management, real-time transaction tracking, automated reconciliation, and AI-driven anomaly detection and fraud prevention.

Roles & Responsibilities

- Developed and executed **automation test scripts** using **Playwright** for **payout and collection workflows** across web and API layers
- Performed **API testing** using **Playwright** and **Postman**, validating **transaction flows**, status handling, and **data consistency** across banking integrations
- Leveraged **AI-based testing** approaches to identify **edge cases**, generate test scenarios, and improve **defect detection efficiency**
- Raised and managed **300+ defects** in **JIRA**, including **AI-assisted defect identification**, prioritization, tracking, and retesting
- Collaborated in **Agile/Scrum** environment with cross-functional teams, ensuring requirement validation, defect resolution, and **high-quality fintech releases**

Software Test Engineer

Jul 2021 – May 2025

Sixaxis Technology Private Limited, Bengaluru

 **Star Performer Award** | **Employee of the Month**

PROJECT #1: Healthcare - Claim Insurance

Mar 2023 – May 2025

Client: Healthedge

A SaaS-based Healthcare Insurance application managing end-to-end insurance lifecycle across providers, payers, employers, and members with policy management, claims processing, enrollment, billing, and provider network management.

Roles & Responsibilities

- Developed and executed automation test scripts using **Playwright** for healthcare modules, achieving **85%+ automation coverage** across **critical claim workflows**
- Performed API testing using **REST Assured** and **Postman**, validating **claims**, **policy**, and **enrollment services**, reducing API regression cycle time by **40%**
- Raised and managed **350+ defects** in **JIRA**, maintaining **defect resolution rate** of **95%+** within sprint cycles
- Contributed to reducing overall release cycle time by **25%** through **early defect detection** and **shift-left testing** practices

PROJECT #2: Online Tours & Travel Marketplace

Jul 2021 – Mar 2023

Client: Travelkida

A dynamic online travel marketplace for booking domestic and international tour packages with customized packages, price comparison, holiday categories, search filters, and secure payment integration across web and mobile platforms.

Roles & Responsibilities

- Developed and executed automation test scripts using **Selenium WebDriver** with **Java** and **TestNG**, achieving **80%+ test coverage** for **booking and payment flows**
- Performed API testing using **REST Assured** and **Postman**, validating **request-response**, status codes, and **backend data flow**

- Raised and managed **200+ defects** in **JIRA**, with **90%+ defect closure rate** ensuring **stable production releases**
- Collaborated in **Agile/Scrum** environment with cross-functional teams, ensuring requirement clarity and **timely delivery**

QA Engineer

BJSHUB Technologies Private Limited

Jan 2018 – Jun 2021

PROJECT #1: Staffiq - HRMS

Client: BJSHUB

Sep 2019 – Jun 2021

A comprehensive HRMS streamlining HR operations with payroll (PF, ESI, TDS compliance), attendance, leave, recruitment, performance management, onboarding workflows, biometric integration, and role-based access control.

Roles & Responsibilities

- Designed and executed manual test cases performing **functional, regression, smoke, and sanity testing** for **HRMS** modules, achieving **90%+ test case pass rate** before **UAT**
- Conducted manual API testing using **Postman** and **SQL database validation**, identifying **30%+ of critical defects pre-release**
- Raised and managed **150+ defects** in **JIRA**, ensuring **zero critical defects** escaped to production across **payroll and compliance modules**

PROJECT #2: Learnfinity - LMS

Client: BJSHUB

Jan 2018 – Sep 2019

A scalable LMS with multi-tenant architecture for universities, trainers, and educators featuring course management, mock tests, certifications, analytics, payment integration, and Zoom/Teams live class collaboration.

Roles & Responsibilities

- Designed and executed manual test cases for **LMS** modules, contributing to **95%+ defect-free releases** across **course management** and **certification workflows**
- Conducted manual API testing using **Postman** and **SQL database validation** to ensure **data integrity** and **backend accuracy**
- Raised and managed **100+ defects** in **JIRA** with consistent on-time defect closure, supporting smooth product launches for **3+ client rollouts**

EDUCATION

MCA (Master of Computer Applications)	National Institute of Technology, Warangal (NITW) — May 2017
B.Sc. (Computer Science)	Bundelkhand University, Jhansi — 2013
12th — M.P. Board	Kalpna Higher Secondary School — 2010
10th — M.P. Board	Government Higher Secondary School — 2008

PERSONAL DETAILS

Name	Ghanendra Yadav
Contact Number	+91-7999697219
Email	ghanendrabl@gmail.com
Location	Bengaluru, India

I declare that the above stated information and facts are true and correct to the best of my knowledge.
